User-defined settings can be applied to a tool, and the settings are carried from one tool to another. There are a number of tool options available in the "Tools Options" dialog box. software for Windows Tuesday, June 25, 2014 Update:

More things to watch for in the Fed meeting We expect the Fed to make a long statement later today. We have

lots of newsworthy things to watch for. But this is the most important: (1) Over the weekend, the Fed confirmed that they intend to keep their target rate near zero for a long, long time. That means that, as long as the economy continues to contract, they will keep pushing their loans off to the side, and pump trillions of dollars into the economy to keep the stock market from falling out of the sky. The primary reason why the stock market has gone parabolic since the Fed's October 2011 "tapering announcement" is because it sent all of the wrong signals. The Fed wanted the market to stop falling, but the market still kept falling. So the Fed bought every bit of volatility that they could, and the market responded by plunging. Those same people are now claiming that there's no need to worry about the Fed because they intend to keep "keeping their powder dry" to fight the next recession. But it's pretty clear that the Fed really thinks that there is no next recession coming. Their plan is to keep inflation low and keep interest rates near zero, which is all they have to fight the next recession. (2) By the time the Fed

makes their statement, you can expect a very lopsided committee. The two people who are most likely to vote against the Fed's easy money policy are Powell and dovish regional Fed Bank president Loretta Mester. They've been very vocal in their calls for higher interest rates. The second most likely to oppose are Richard Fisher, president of the Dallas Fed, and economist Charles Plosser
