Q: When to use Vue I am currently learning JavaScript and Vue. So far I am using Vue simply to be able to implement the bootstrap of Vue.js. If it is a good practice to use Vue for example to add a v-onclick in a component?

A: Vue can be used in many ways. One is to create a base component which contains shared functionality, for example:

```
Hello world! export default { mounted() { console.log("mounted"); } }
```

One way to create a component is to create a file called `src/components/ModalComponent.vue` which contains the same content as the example above.

You can pass variables to the component using props, and can have methods attached to it. Another way to use Vue is to implement the SCSS box layout or flexbox. The key concept in these

components is the Vue directives, such as v-on and v-model. These are the main concepts that make Vue easy to use for people with a CSS background. ist (bottom left) wrote that when he was young he would often visit Cardiff's Rhondda Street where he would experience the Welsh milkman's true 'tr
