To all the companies, students and researchers who are looking for an information about SpeechWriting, Speech Recognition, Language Education, e-Learning and SpeechExpert, please see the official website: Chinese oil well drilling cut by outbreak of bird flu In a sign of the growing impact of the new strain of bird flu in China, a drilling rig used to extract oil and gas was halted on Thursday, workers were laid off and China's top oil service provider was forced to call in extra staff. 900 workers have been quarantined and 25 million birds have had to be killed. Although the country has not yet suffered a poultry crisis you can bet that China will. STORYLINE: Chinese oil rig workers in the Gulf of Mexico are being laid off when the federal US government halts drilling operations until the risk of a bird flu pandemic can be assessed. Washington started on Thursday to issue permits with extra biosecurity measures, cutting the number of workers on the rig to as few as 25 from more than 900. But once the rig was halted it became clear that the outbreak of avian flu in China would have huge consequences. After all, Nigeria, Algeria and the United States are just some of the countries that import oil from China. The total ban on drilling means that oil production will drop in 2013 and even more next year. It also creates numerous problems because onshore and deepwater drilling is on the up and up.

With new techniques and advances in oil well drilling, the amount of oil and gas that China will be able to extract is increasing. So even when the US starts bringing rigs back into action, there is likely to be a shortage of workers. It's likely that the Chinese oil rig workers, who are mainly from south China, will face a problem getting back home. But the situation will only get worse for China's energy industry because their grip on global oil prices is about to weaken. If you've been living under a rock for the last thirty years you may not realize that the world has changed. In this video I look at what kids need online and how to use the internet for learning. Not even a month since the release of the first Windows 8 tablet, the Asus Transformer Pad Infinity TF700, things are heating up. ASUS has unveiled the TF700T, a 15.6-inch convertible tablet with a 3000 x 2000 screen, a speedy Intel Atom Z3735G processor, and 8GB of RAM. The TF700T will be available in "Iron Gray" and "Snow White" (how neutral is that?) starting at \$499 USD and \$799 USD, respectively. "Both Asus tablets are 4G LTE enabled and will be available in the U.S. later this year. As a result, the one thing you can guarantee is that you'll be able to get online whenever, wherever, whichever way you want," says Jason Gruener, a product manager for ASUS USA. Despite the competitive price tag, ASUS is going up against two other convertible 7-inch to 10-inch tablets: the Samsung Galaxy Tab 2 7.0 and the Nexus 7. The ASUS offers a larger screen, and a larger footprint than its counterparts. It's the size of an iPad Mini, but it's only 8.4mm thin and weighs 329 grams, making it easily tote along when you're out and about. The ASUS is half as thick as the iPad Mini, and is 0.9 inches thinner than the Galaxy Tab 2 7.0, giving it more heft in your
